To whom it may concern:

This letter is in support of the Press Mate 8800 Noninvasive Blood Pressure Monitor. I have tested this monitor extensively in our ICU and find it to be easy to use, reliable, and dependable. It works on all sizes of dogs and is more dependable in cats than any other automatic blood pressure monitors. Its compact size and light weight make it ideal for use as a portable unit. I would recommend this unit to anyone looking for a good all around noninvasive blood pressure monitor.
